Life Safety & Security Systems

When it comes to Life Safety & Security Management Systems, we are true Providers of Innovative Solutions, Unparalleled Service & Peace Of Mind.

Our Life Safety & Security systems group assists our enterprise customers to work through innovative business solutions, unparalleled service and offers peace of mind. Our professionals bring deep technology skills and industry knowledge to your organization and work closely with you to design and implement a solution that is aligned with the business objectives.

Fire Alarm System

An automatic fire alarm system is designed to detect the unwanted presence of fire by monitoring environmental changes associated with combustion. Automatic fire alarm systems can be used to notify people to evacuate in the event of a fire or other emergency, to summon emergency services, and to prepare the structure and associated systems to control the spread of fire and smoke.

Building Management System

Building Management System (BMS) is a computer-based control system installed in buildings that controls and monitors the building's mechanical and electrical equipment such as ventilation, lighting, power systems, fire systems, and security systems. A BMS consists of software and hardware; the software program, usually configured in a hierarchical manner, can be proprietary, using such protocols.

Fire Fighting System

Fire safety is often a component of building safety. It refers to precautions that are taken to prevent or reduce the likelihood of a fire that may result in death, injury, or property damage, alert those in a structure to the presence of a fire in the event one occurs, better enable those threatened by a fire to survive, or to

Integrated Security Management Systems

When it comes to integrated security management systems, we are true believers of a layered approach that ensures a balanced & coherent involvement of people, technologies & processes.

Our integrated Security management systems group assists our enterprise customers to work through complex business and technology issues to provide a straight forward approach to security systems. Our security professionals bring deep technology skills and industry knowledge to your organization and work closely with you to design and implement a security solution that is aligned with your business objectives.

In the e-business world, we are committed to demonstrating how security can improve your customers' trust in you. We know that security initiatives, when executed with business goals in mind, can decrease risk, reduce costs, improve productivity, increase availability and allow rich and secure interaction with employees, business partners and customers.

Security Systems

We provide a variety of integrated security management systems & solutions to elevate security and harden your infrastructure. Our security team is keen to leverage security and safe guard your assets from intruders.

Access control

It is the ability to permit or deny the use of a particular resource by a particular entity. Access control mechanisms can be used in managing physical resources, logical resources or digital resources. We offer secure authentication, encryption & more for you peace of mind.

Structured cabling

We provide the best of breed structured cabling solutions to strengthen your data & voice communication network.

Integrated Security Management Systems

Enterprise IP video surveillance

Enterprise IP video surveillance is a video surveillance architecture that manages and records large quantities of IP-based surveillance cameras using Enterprise Software Architecture.

At JBK, we use emerging technologies and a unique approach to empower our customers to do anything, anytime, and any where.

Closed-circuit television (CCTV)

Use of video cameras to transmit a signal to a specific place, on a limited set of monitors. It differs from broadcast television in that the signal is not openly transmitted, though it may employ point to point wireless links. A more advanced form of CCTV, utilizing Digital Video Recorders (DVRs), provides recording for possibly many years, with a variety of quality and performance options and extra features (such as motion-detection and email alerts).

Our competent & certified security consultants and engineers will deliver a combination of integrated solutions to design and implement an end to end solution adopting defense-in-Depth

Intrusion detection system (IDS)

An IDS is software and/or hardware designed to detect unwanted attempts at accessing, manipulating, and/or disabling of computer systems, mainly through a network.

Our process-oriented approach & competent professionals through our experience ensures your security defense measures are met to the standards.

eBusiness Solutions

We provide leading edge technology driven eBusiness solutions in the areas of e-finance , e- commerce to help you achieve your business goals in a most cost effective manner
